

LIFE WITHOUT DAIRY IS NOT SUSTAINABLE.

SO DAIRY IS BECOMING MORE SUSTAINABLE

Dairy farmers used
30%
less water between
2007-2017!

Milk travels only
300 miles
from the farm to the
store! How's that
for a light footprint?

Dairy farmers reduced
their **C** footprint by
19%
between 2007 & 2017.

Dairy farmers are putting in the work
to achieve greenhouse gas (GHG)

neutrality
by 2050.

Don't take our word
for it. Do your own
research.
