

MILK MAKES THE GRADE

- Milk is a delicious and nutritious beverage produced fresh in every U.S. state.

- Milk is made possible by dairy farmers committed to responsibly producing milk to nourish Americans while remaining mindful of natural resources.

- School meal programs are vitally important to students' overall nutrition and health, and this includes helping them reach the recommended daily dairy servings.

- Milk travels from the farm to your school in usually less than 48 hours.

- Kids love cold milk! Milk tastes best when it is served below 40°F.

- Cold Milk Stays Fresh Longer! It's important that milk stays below 40 degrees throughout the delivery, storage, and serving cycle to optimize taste and quality.

- Temperatures above 40°F reduce the shelf life of milk. The shelf life of milk is shortened by a full 50% for every five degrees rise in temperature
